

$$\begin{aligned}
 (1) \quad f(1) &= \int_1^2 |\log t - \log 1| dt \\
 &= \int_1^2 |\log t| dt \\
 &= \int_1^2 \log t dt \\
 &= \int_1^2 t' \log t dt \\
 &= [t \log t]_1^2 - \int_1^2 t \times \frac{1}{t} dt \\
 &= 2 \log 2 - [t]_1^2 \\
 &= 2 \log 2 - (2-1) \\
 &= \boxed{-1 + 2 \log 2}
 \end{aligned}$$

$$\begin{aligned}
 f(2) &= \int_1^2 |\log t - \log 2| dt \\
 &= \int_1^2 (\log 2 - \log t) dt \\
 &= [t]_1^2 \cdot \log 2 - \int_1^2 \log t dt \\
 &= (2-1) \cdot \log 2 - f(1) \\
 &= \log 2 - (-1 + 2 \log 2) \\
 &= \boxed{1 - \log 2}
 \end{aligned}$$

(2) $f(x)$ は右図の部分の面積を表し、

$$\begin{aligned}
 f(x) &= \int_1^x (\log x - \log t) dt \\
 &\quad + \int_x^2 (\log t - \log x) dt
 \end{aligned}$$

t から

$$\begin{aligned}
 f(x) &= [t]_1^x \cdot \log x - \int_1^x \log t dt + \int_x^2 \log t dt - [t]_x^2 \cdot \log x \\
 &= (x-1) \log x - [t \log t]_1^x + \int_x^2 t \times \frac{1}{t} dt + [t \log t]_x^2 - \int_x^2 t \times \frac{1}{t} dt - (2-x) \log x \\
 &= \{(x-1) - (2-x)\} \log x - x \log x + (x-1) + 2 \log 2 - x \log x - (2-x) \\
 &= (2x-3) \log x + (2x-3) - 2x \log x + 2 \log 2 \\
 &= \boxed{2x-3 + 2 \log 2 - 3 \log x}
 \end{aligned}$$

$$(3) \quad f'(x) = 2 - \frac{3}{x} = \frac{2x-3}{x} \quad \text{より} \quad f'(x) = 0 \text{ とおくと } x = \frac{3}{2}.$$

よって $1 \leq x \leq 2$ での増減表は下のようになる

x	1	...	$\frac{3}{2}$	...	2
$f'(x)$		-	0	+	
$f(x)$	$-1+2\log 2$	$\searrow$	最小	$\nearrow$	$1-\log 2$

よって $f(\frac{3}{2})$ は最小値をとる

$$\begin{aligned} f\left(\frac{3}{2}\right) &= 2 \times \frac{3}{2} - 3 + 2\log 2 - 3\log \frac{3}{2} \\ &= 3 - 3 + 2\log 2 - 3 \times (\log 3 - \log 2) \\ &= 2\log 2 - 3\log 3 + 3\log 2 \\ &= \boxed{5\log 2 - 3\log 3} \end{aligned}$$

$$\begin{aligned} \text{また } f(1) - f(2) &= -1 + 2\log 2 - (1 - \log 2) \\ &= -2 + 3\log 2 \\ &= \log e^{-2} + \log 2^3 \\ &= \log \frac{2^3}{e^2} \\ &> \log \frac{2^3}{2.8^2} = \log \frac{8}{7.84} > 0 \end{aligned}$$

$$\begin{array}{r} 2.8 \\ \times 2.8 \\ \hline 224 \\ 56 \\ \hline 7.84 \end{array}$$

よって $f(1)$ が最大値となる。

ゆえに 最大値は $-1 + 2\log 2$ ($x=1$ のとき)

最小値は $5\log 2 - 3\log 3$ ($x=\frac{3}{2}$ のとき)
